SUPERJIG - Appendix II

Bit Selection

Optional router bits for variably spaced through and half-blind dovetails.

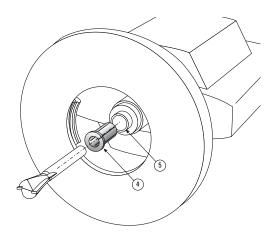

Bit Selection for Through Dovetails

8° Dovetail Bit for Tails

The pins ① must fit into the sockets ②. So the dovetail bit's depth of cut ⑧ must be equal to or a little greater than the pinboard thickness ③.

Measure the pinboard thickness 3 and select the dovetail bit with

the correct depth of cut ® from the following pages (bits must be 8° for through dovetails).

Straight Bit for Pins

The matching straight bit is listed just below the dovetail bits. The 5/16" diameter No. 140-8, 8mm shank is the only straight bit you need with the Superjig.

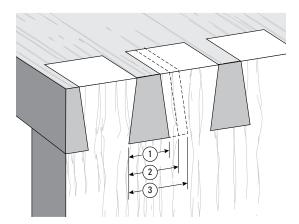

Guidebush

All joints on the Superjig are routed with the e7-Bush, or all but box joints with any 7/16" OD guidebush (min. barrel depth 1/4"). See page 68.

Shank Selection

Note: You will require a router with an 8mm or ½"[12,7mm] collet to use our 8mm shank bits. For a ½"[12,7mm] collet router you will require our ½"[12,7mm] to 8mm collet reducer No. 172-8. Note: This is a collet reducer ④, not a collet ⑤. It does not replace the collet, it slides directly into your ½"collet. *Do not remove the collet nut when installing the collet reducer*.

You will note that some of the dovetail bits' depths of cut overlap. For example:

No.80-8 bit (B): 1/2"- 13/16"[12 - 20mm] No.70-8 bit (B): 1/4"-1/2"[6 - 12mm]

This means that 1/2" boards can be joined using either the No.80-8 and 140-8 combination, the No. 75-8 and 140-8 combination, or the No.70-8 and 140-8 combination.

The three bit combinations will produce slightly different-looking joints because each dovetail bit produces a different size pin:

No. 70-8 3/8" ①

No. 75-8 7/16" 2

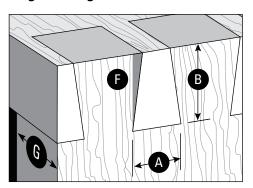

No. 80-8 ½" ③.

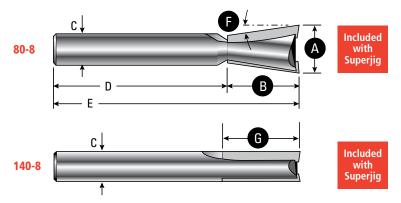

Do not attempt to rout dovetails at less than the minimum depth of cut specified.

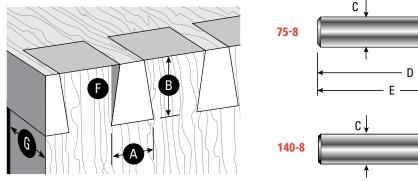

Note: Bit and joint drawings are about actual size.

Half-Blind Dovetails

Bit Selection for Half-Blind Dovetails

Both parts of a half-blind dovetail are cut with the same dovetail bit. The dovetail bit's working depth of cut B must be less than the pinboard thickness 1 for flush drawers by at least 1/8"[2mm], and slightly less than the rabbet depth 2 for rabbeted drawer fronts. Minimum pin board (drawer front) thickness is 1/2"[12mm].

Drawer side thickness ③ does not affect bit selection. *Note:* ⑤ is the nominal working depth for half-blind

dovetails, not the maximum depth. (B) must not be varied, except for minor adjustments for joint fit. See page 35.

Measure the drawer front thickness (minimum ½"[12mm]) ① or rabbet depth (minimum ½16"[11,1mm]) ② and select the bit with the appropriate depth of cut ® from one of the five bits on the following pages.

Guidebush

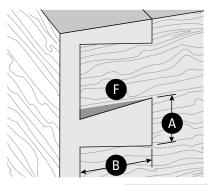

All joints on the Superjig are routed with the e7-Bush, or all but box joints with any 7/16" OD guidebush (min. barrel depth 1/4"). See page 68.

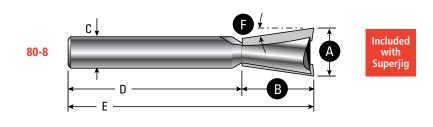

Shank Selection

Note: You will require a router with an 8mm or ½"[12,7mm] collet to use our 8mm shank bits. For a ½ "[12,7mm] collet you will require our ½"[12,7mm] to 8mm collet reducer No.172-8. Note: This is a collet reducer ④, not a collet ⑤. It does not replace the collet, it slides directly into your ½"collet. *Do not remove the collet nut when installing the collet reducer*.

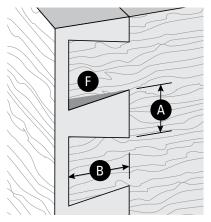

Note: Bit and joint drawings are about actual size.
